Real-Time Rendering & Virtual Reality

Who We Are

Enscape is an easy to use Real-Time Rendering & Virtual Reality plugin. Enscape provides architects with a quicker way to create rich real-time 3D visualization renderings. This allows for faster design iterations with less preparation time, allowing instantaneous design reviews and presentations.

With Enscape, your presentations in-house and with clients achieve new levels. Real-Time Rendering and VR allow faster iterations and more efficient workflows. No extra training needed.

Jamie Casas
Melbourne BIM Manager
Wood & Grieve Engineers

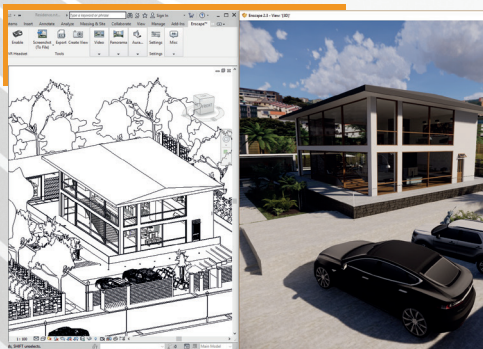

“ Using Enscape for real-time visualisation and rendering has enabled us to accurately communicate our engineering design intent to our clients and stakeholders. The ability to walkthrough BIM models and regenerate design changes without leaving Revit is a ‘real time’ saver. ”

“ With Enscape being able to smoothly navigate even our largest models, we are able to experience any stage of design in real-time with stunning quality and realism. The ability to give designers and clients an immersive experience with virtual reality in a single click has begun to shift our way of presenting and conveying ideas! ”

Paul Renner
BIM Practice Specialist
Kohn Pederson Fox (KPF)
